		Application No.	Applicant(s)				
Office Action Summary		10/621,344	ANCEL, JEAN-ERICK				
		Examiner	Art Unit				
		Janet L Coppins	1626				
The MAIL Period for Reply	ING DATE of this communication appe	ears on the cover sheet with the c	orrespondence address				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 1 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
1)⊠ Responsiv	e to communication(s) filed on <u>07 Jul</u>	<u>y 2003</u> .					
2a)☐ This action	This action is <b>FINAL</b> . 2b)⊠ This action is non-final.

## **DETAILED ACTION**

Claims 1-49 pending in the instant application.

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted:

Group I, claims 1-23, in part, drawn to a process for preparing compounds according to formula (I), wherein W is Nitrogen, involving a starting material of formula II.

Group II, claims 24-25, in part, drawn to a different process for preparing compounds according to formula (I), wherein W is Nitrogen, involving an intermediate of formula III.

Group III, claims 26-37, in part, drawn to a different process for preparing compounds according to formula (I), wherein W is Nitrogen, involving intermediates of formulae II, IV, V, and VI.

Group IV, claims 38-39, in part, drawn to a different process for preparing compounds according to formula (I), wherein W is Nitrogen, involving intermediates of formulae III, IV, V, and VI.

Group V, claims 40-41, in part, drawn to compounds according to formula II, wherein W is Nitrogen.

Group VI, claims 44-45, in part, drawn to compounds according to different formula IV, wherein W is Nitrogen.

Group VII, claim 48, in part, drawn to compounds according to different formula III, wherein W is Nitrogen.

Group VIII, claims 1-23, in part, drawn to a process for preparing compounds according to formula (I), wherein W is -CR<sup>4</sup>, involving a starting material of formula II.

Group IX, claims 24-25, in part, drawn to a different process for preparing compounds according to formula (I), wherein W is -CR<sup>4</sup>, involving a starting material of formula III.

Art Unit: 1626

Group X, claims 26-37, in part, drawn to a different process for preparing compounds according to formula (I), wherein W is -CR<sup>4</sup>, involving intermediates of formulae II, IV, V, and VI.

Group XI, claims 38-39, in part, drawn to a different process for preparing compounds according to formula (I), wherein W is -CR<sup>4</sup>, involving intermediates of formulae III, IV, V, and VI.

Group XII, claims 40-41 (in part) and 42, 43, drawn to compounds according to formula II, wherein W is -CR<sup>4</sup>.

Group XIII, claims 44-45 (in part), and 46, 47, drawn to compounds according to different formula IV, wherein W is -CR<sup>4</sup>.

Group XIV, claims 48 (in part), and 49, drawn to compounds according to different formula III, wherein W is  $-CR^4$ .

2. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Upon thorough consideration of the claims, the examiner has determined that a lack of unity of invention exists, as defined in Rule 13.

PCT Rule 13.1 states that the international application shall relate to one invention only or to a group of inventions so linked as to form a single general inventive concept ("requirement of unity of invention").

PCT Rule 13.2 states that unity of invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding special technical features.

Annex B, Part 1(a), indicates that the application should relate to only one invention, or if there is more than one invention, inclusion is permitted if they are so linked to form a single general inventive concept.

Annex B, Part 1(b), indicates that "special technical features" means those technical features that as a whole define a contribution over the prior art.

Art Unit: 1626

Annex B, Part 1(c), further defines independent and dependent claims. Unity of invention only is concerned in relation to independent claims. Dependent claims are defined as a claim that contains all the features of another claim and is in the same category as the other claim. The category of a claim refers to the classification of claims according to subject matter, e.g. product, process, use, apparatus, means, etc.

Annex B, Part 1(e), indicates the permissible combinations of different categories of claims. Part 1(e(i)) states that inclusion of an independent claim for a given product, an independent claim for a process specially adapted for the manufacture of the said product, and an independent claim for a use of the said product is permissible.

Annex B, Part 1(f) indicates the "Markush practice" of alternatives in a single claim.

Part 1(f(i)) indicates the technical interrelationship and the same or corresponding special technical feature is considered to be met when: (A) all alternatives have a common property or activity, and (B) a common structure is present or all alternatives belong to a recognized class of chemical compounds. Further defining (B) in Annex B, Part 1(f)(i-iii), the common structure must; a) occupy a large portion of their structure, or b) the common structure constitutes a structurally distinctive portion, or c) where the structures are equivalent and therefore a recognized class of chemical compounds, each member could be substituted for one another with the same intended result. That is, with a common or equivalent structure, there is an expectation from knowledge in the art that all members will behave in the same way. Thus, the technical relationship and the corresponding special technical feature result from a common (or equivalent) structure that is responsible for the common activity (or property). Part 1(f(iv)) indicates that when all alternatives of a Markush grouping can be differently classified, it shall

Art Unit: 1626

not, taken alone, be considered justification for finding a lack of unity. Part 1(f(v)) indicates that when dealing with alternatives, it can be shown that at least one Markush alternative is not novel over the prior art, the question of unity of invention shall be reconsidered, but does not imply that an objection shall be raised.

3. The inventions listed as Groups I-XIV do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The claims herein lack unity of invention since the compounds defined in the claims lack a significant structural element qualifying as the special technical feature that defines a contribution over the prior art. The compounds claimed contain,

$$R^3$$
 $N$ 
 $N$ 
 $R^2$ 
 $W$ 

which does not define a contribution over the prior art (variables excluded). Attached to the instant office action is a copy of a reference that provides that the technical feature, which can be taken as a whole amongst all the alternatives, as depicted above, is not a 'special technical feature' as defined in PCT Rule 13.2, by failing to define a contribution over the prior art, as it was known in the art prior to the filing of the instant application. See attached EP 0898886 reference of 1-arylpyrazoles as insecticides, page 4.

Furthermore, the substituents vary extensively and when taken as a whole result in vastly different compounds. Accordingly, unity of invention is considered to be lacking and restriction

Art Unit: 1626

of the invention in accordance with the rules of unity of invention is considered to be proper.

Additionally, the vastness of the claimed subject matter and the complications in understanding the claimed subject matter imposes a burden on any examination of the claimed subject matter.

- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Telephone Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Janet L. Coppins whose telephone number is 571.272.0680. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Joseph McKane can be reached on 571.272.0699. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
